Strumenti concepiti in lega beryllio-cobalto (beryllium) e non devono essere usati in ambienti con presenza di scintille o con apparecchiature che producano una scintilla.

Les instruments sont conçus en une tôle d'alliage beryllium-cobalt pour limiter le risque d'explosion.

These specialized tools cannot be used in contact with equipment or with devices that produce or produce sparks.

Aluminium can react with the copper of the tool surface under certain conditions, especially with very dry nitrogen exposure.
